Super-Deluxe™ Coat and Pants with Freedom® Design

Fully featured coat with bi-swing back for outstanding forward mobility and low-rise waist pants for increased comfort and uniform-style fit

Super-Deluxe™ Coat with Bi-Swing Back

The Super-Deluxe™ Coat is ergonomically designed to promote free, natural movement when performing firefighting operations. It includes all of Janesville's industry-leading Freedom® Design features in the underarms and elbows. These features allow your physical energy to be concentrated on the task at hand for greater mobility, reduced stress and increased safety.

More Comfortable — No Tugging, Pulling Or Bunching

The bi-swing back design is the key comfort and mobility feature on the Super-Deluxe™. This is how it works: an inverted pleat is placed in both the outer shell and thermal barrier. It expands as your arms move forward. There's no tugging or binding at the shoulder. When your arms return to a more natural position, the pleat closes so there's no bunching of material.

The coat is available in 32 or 35 inch lengths.

Bi-swing back provides optimum comfort and mobility. It expands to reduce binding and promotes free forward movement.

Super-Deluxe™ Pants with Low-Rise Waist for Increased Comfort

Super-Deluxe™ Pants have a low-rise waist design (two inches lower than traditional turnout gear) that complements the natural contours of your body for increased comfort. They fit and feel more like an every day pair of trousers.

The Freedom® Design features in the crotch and knee enhance mobility on the fireground, especially when crawling, climbing or bending. Nine inches of Semper Dri™ in the lower legs repels water to keep your pants dry and the working weight low.
