HAAGEN to Build Bus Fire Simulator for Taiwan National Fire Agency

Baarle-Nassau, Netherlands, 6/27/16 – HAAGEN, a member of the LION group, has been chosen to design and build a mobile bus fire simulator for the Taiwan National Fire Agency.

The Agency was prompted to invest in their hands-on training because of a considerable increase in the number of bus fires in recent years due to old and poorly maintained buses. The New HAAGEN Bus Fire Simulator will allow firefighters to get hands-on experience responding to these emergencies.

The simulator is designed to accurately resemble a real bus, including the front grille, stairs leading up to the driver's seat, and passenger seats. Trainees will be able to experience responding to a rear engine fire, flashover, and digital driver seat fire. The project is set to be completed this fall.

For additional information on HAAGEN training tools, visit the company's website at HAAGEN.com.

About HAAGEN – HAAGEN, a member of the LION Group, utilizes patented smart technology to develop the world's most advanced fire safety and emergency training products. From fire extinguisher, hazmat, search and rescue and large scale fire training tools, HAAGEN is committed to providing solutions for firefighters, safety officers and emergency response agencies.
